GeoTrust a digicert company

Vulnerability Manager

The quickest way for small businesses to find and remediate vulnerabilities in online servers and internet-facing assets.

Vulnerability Manager Product Overview

GeoTrust Vulnerability Manager is a fully automated vulnerability scanning service designed for internet-facing servers and assets. It scans for 375,000+ known vulnerabilities, including OS issues, software flaws, configuration mistakes, weak passwords, and more.

1. Start by entering the IPv4 address (public or private) of your server or device.
2. Choose to run an external cloud-based scan and/or an internal agent-based scan.

- **Comprehensive detection** of vulnerabilities.
- **Automatic email alerts** for high-risk/critical issues.
- **Detailed reports** with actionable remediation steps.
- **Intuitive prioritization** focuses on important items.
- **Step-by-step instructions** for remediating vulnerabilities.

Vulnerability Manager Features

- **Scans for 375,000+ Vulnerabilities.** Comprehensive automated scans check your servers and infrastructure against an extensive vulnerability database—helping ensure weaknesses don't go undetected.
- **Flexible and Affordable.** No contracts, no commitments. Scan one asset or scan 100. Pay only for what you need, whenever you need it.
- **Comprehensive Asset Protection.** Protects a wide range of assets (both internet-facing and on private networks), including Linux and Windows servers, load balancers, firewalls, and more.
- **The Easiest Setup Ever.** Vulnerability Manager deploys in just a few minutes. Just follow the quick, step-by-step guide to run your first scan.
- **Prioritize What Matters Most.** Our reports pinpoint which assets and vulnerabilities carry the highest risk, helping you focus your time on remediating the vulnerabilities that matter most.
- **Share & Collaborate Easily.** Download and share reports with your team so the right people see the issues and fix them fast. Empowers collaboration to help ensure critical issues aren't overlooked.

Comprehensive Vulnerability Coverage

GeoTrust Vulnerability Manager includes both external and internal scanners to give you the full security picture, detecting 375,000+ vulnerabilities including:

- OS vulnerabilities (Windows/Linux/MacOS)
- Unpatched software/applications
- Insecure web applications
- CMS/web framework vulnerabilities
- Unpatched libraries
- Weak/default credentials
- Open ports and services
- Insecure services (SSH, FTP, etc.)
- Database vulnerabilities
- Web server software vulnerabilities
- Web server misconfigurations
- Insecure system configurations
- Backdoors/trojan horses
- And many other types of CVEs

How Vulnerability Scanning Reduces Security Uncertainty

Do our servers have exploitable vulnerabilities?

All servers and internet-facing assets are easily discoverable and targetable by hackers. Even a single unpatched system, misconfigured service, or exposed port can be exploited to gain unauthorized access.

How can we patch newly discovered vulnerabilities before attackers see them?

Receive instant email notifications the moment Vulnerability Manager detects any critical vulnerabilities or configuration errors, so you can respond before an issue escalates.

Is our software actually up-to-date?

The scanner actively checks the version number of every running service against its massive database of known vulnerabilities (like those in the CVE database).

What risks do external attackers actually see?

By performing external scans, the manager simulates an attacker's view. It identifies precisely which IP addresses, ports, and services are exposed to the public.

Are our security settings correct?

Scanning checks server configurations and flags deviations from best practices, such as overly permissive file permissions, weak passwords, or unnecessarily exposed network ports.

If a vulnerability is found, what exactly do we do?

Effective scanners don't just find problems. They provide step-by-step remediation instructions. This turns a vague alert into a clear, prioritized checklist, giving you remediation clarity.

Industry-Leading Vulnerability Detection

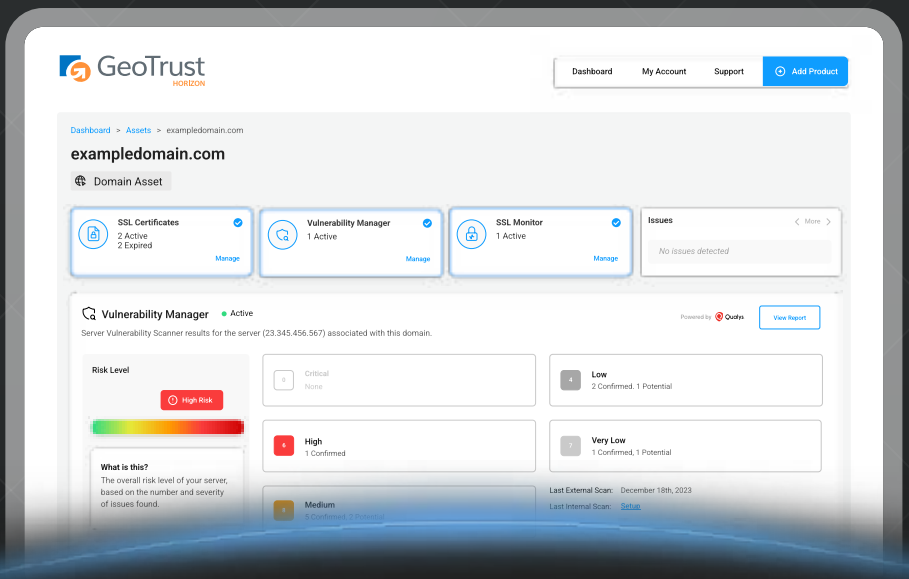

GeoTrust Vulnerability Manager is powered by proven vulnerability detection from Qualys, the same award-winning technology that secures companies in 130+ countries.

70%	of the Forbes Global 50
80%	of the Forbes top 10 tech companies
98.7%	coverage of CISA Known Exploited Vulnerabilities

GeoTrust HORIZON

GeoTrust Horizon Platform

Built flexible for small businesses, GeoTrust Horizon gives small and medium businesses the affordability and control they need to protect their sites, servers, and web apps. No contracts, no sales calls. Just the security you need with up-front pricing and tools that scale as you grow.

Platform Features

Detect & patch security vulnerabilities
Find security risks with internal and external scans & fix vulnerabilities before malicious actors exploit them.

Secure websites, servers, web apps
Easily set up and manage security for all your internet-facing assets, including websites, servers, and apps.

Fully automated SSL/TLS security
Get always-on security. No more manually installing or renewing SSL certificates.

24/7 monitoring & automation
Security on autopilot, with instant alerts when action is needed.
